1 Result

For a data set containing n latency measurements t_i , the arithmetic mean is defined by Equation (1).

$$\bar{t} = \frac{1}{n} \sum_{i=1}^n t_i \quad (1)$$

The compact build check in Table 1 records the two essential parts of this one-page technical note.

Table 1: Build check	
Item	Status
Formula reference	Passed

The numbered formula and the captioned table are both referenced in the body text. The document is therefore ready for a command-line build.
